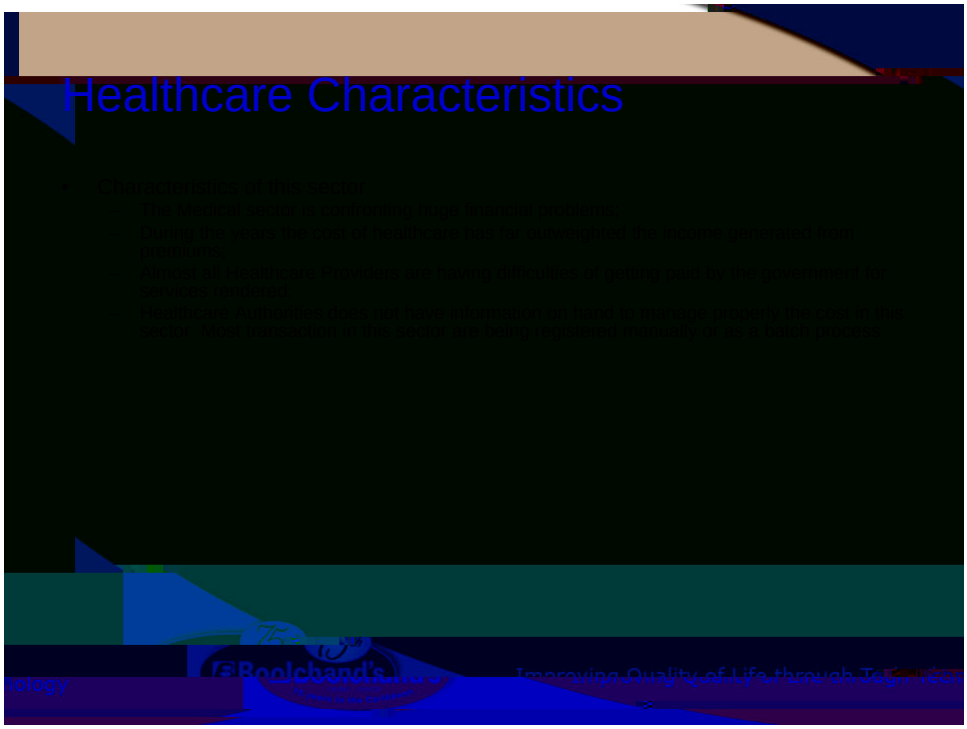
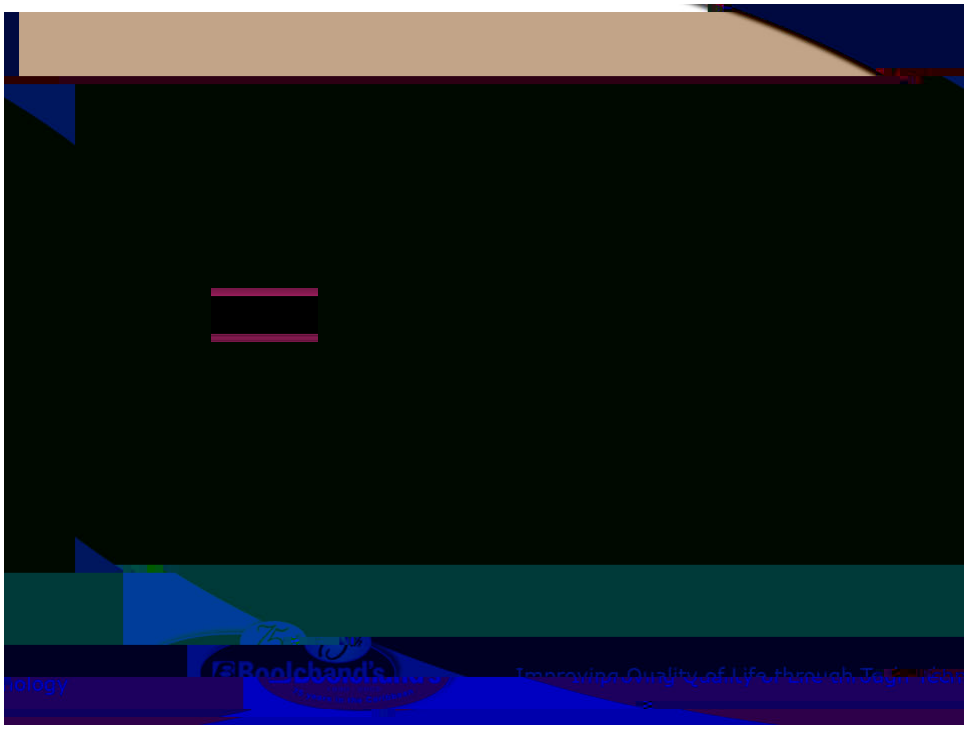
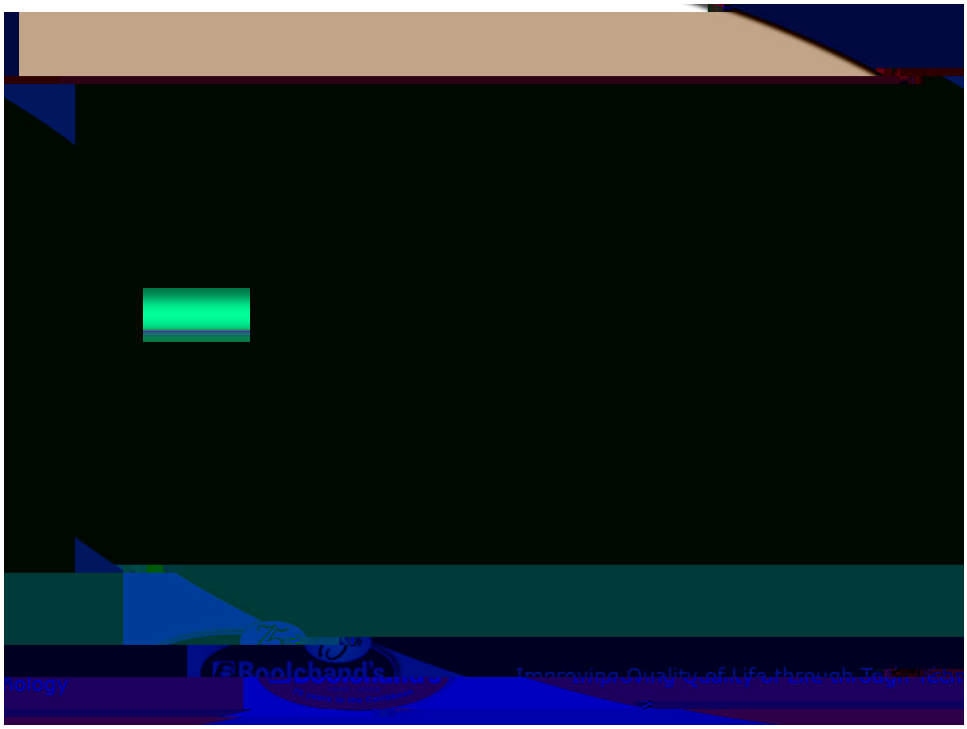
The Need for Information

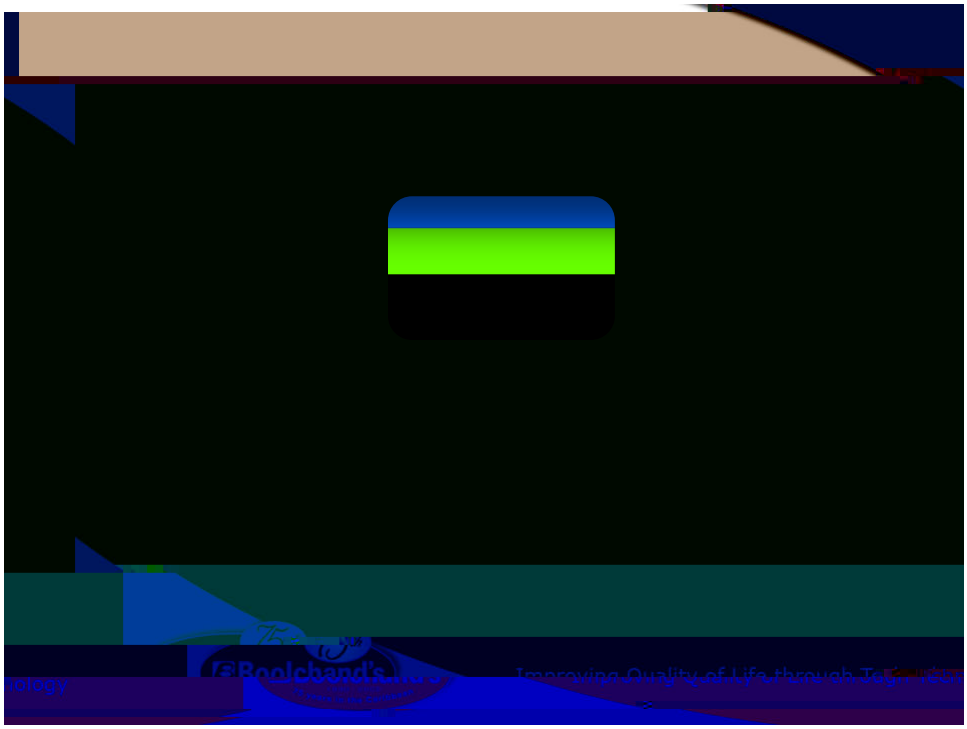
- To determine the tariff and to control cost with regard to an AZV it is the essential that the healthcare authorities have access all the time to information related to:
  - the amount of patients, their health issues and their cost to the different healthcare providers such as:



Healthcare Characteristics
Characteristics of this sector
The Medical sector is confronting huge financial problems.
During the years the cost of healthcare has far outweighted the income generated from premiums.
Almost all Healthcare Providers are having difficulties of getting paid by the government for services rendered.
Healthcare Authorities does not have information on hand to manage properly the cost in this sector. Most transaction in this sector are being registered manually or as a batch process.

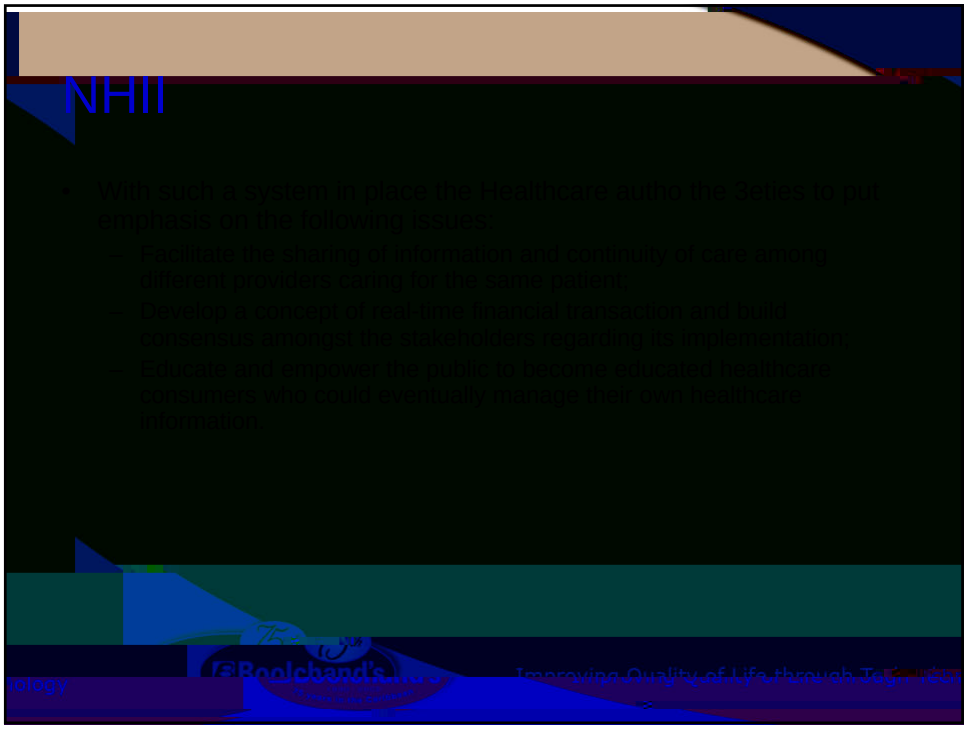


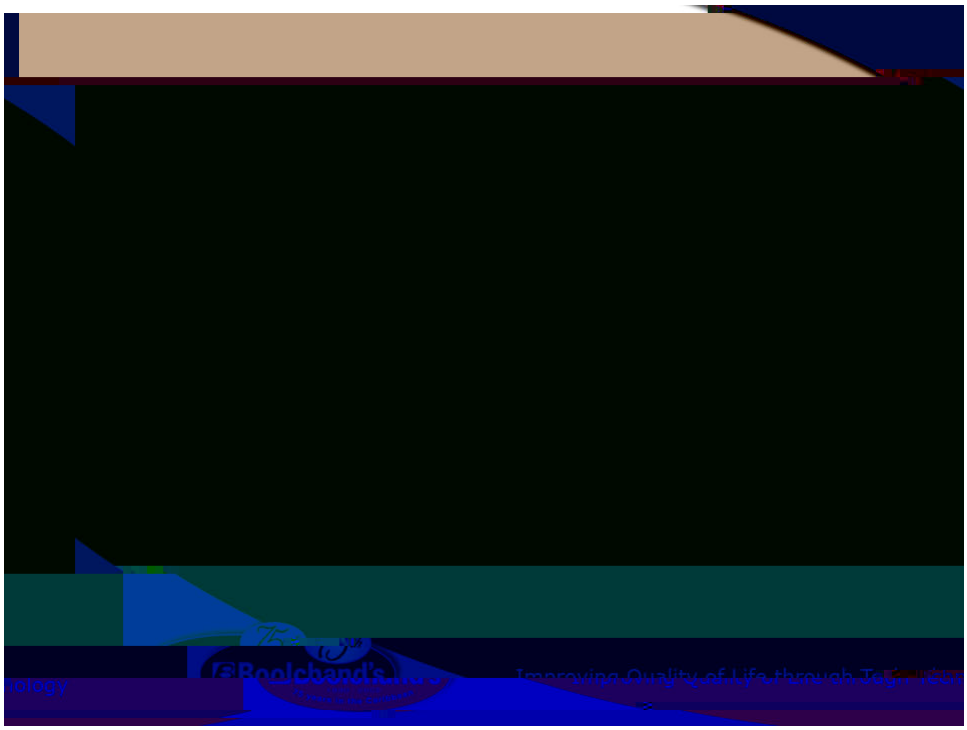


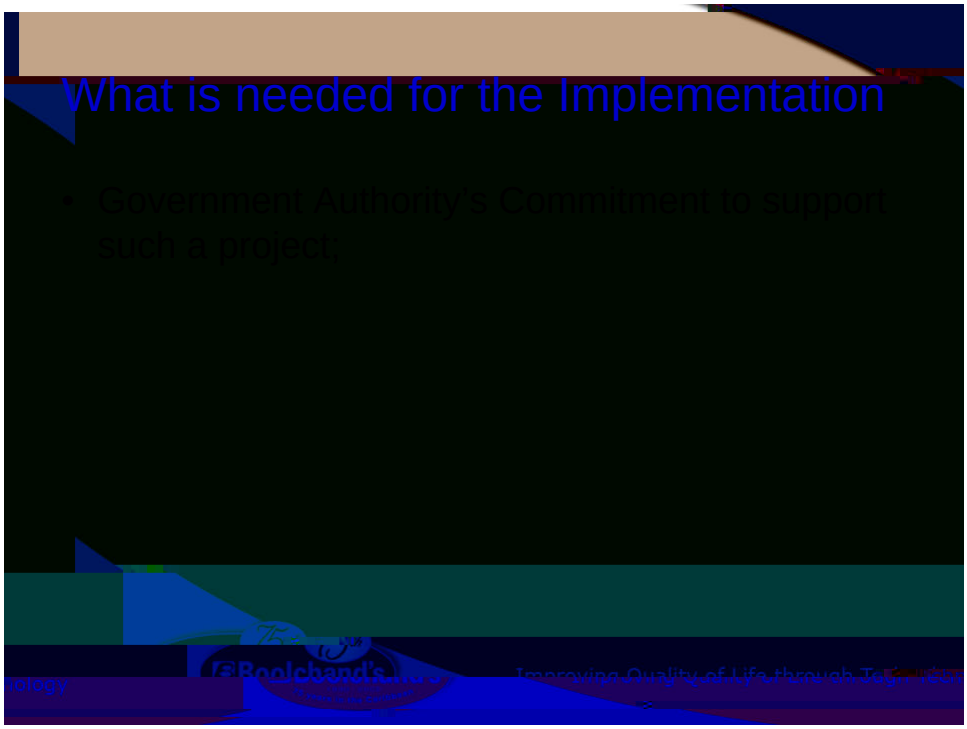


NHII

- With such a system in place the Healthcare autho the 3cties to put emphasis on the following issues:
  - Facilitate the sharing of information and continuity of care among different providers caring for the same patient;
  - Develop a concept of real-time financial transaction and build consensus amongst the stakeholders regarding its implementation;
  - Educate and empower the public to become educated healthcare consumers who could eventually manage their own healthcare information.





What is needed for the Implementation


- Government Authority's Commitment to support such a project;
